

## API VAPT Report

KRPUNE Native, Applicability Assessment

|               |                                   |             |              |
|---------------|-----------------------------------|-------------|--------------|
| Project Name  | KRPUNE Native (krpune-native)     | Report Date | 16 July 2026 |
| API(s) Tested | Not applicable, see finding below |             |              |

### Finding: Not Applicable, No API in This Project

A full source code review of the krpune-native repository confirmed the application has no backend API of its own. All content, including floor plans, amenities, mobility, transport, gallery, and VR tour data, is bundled into the application at build time and served locally. The application makes no network calls during normal use.

Because there is no API to test, this document is submitted as Not Applicable for the IT review checklist rather than left blank. If a backend API is introduced later, for example if the application moves from bundled offline data to a live content-managed backend, an API VAPT should be commissioned at that point with a qualified testing vendor.
